

(Re)installing RCFV

The Really Cool FiTeR Viewer

© 2018-2021 Takamomto, LLC

The Really Cool FiTeR Viewer

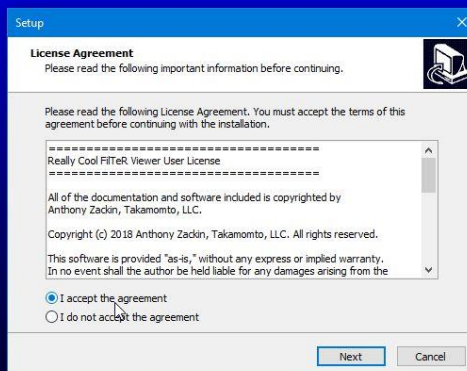

© 2018 – 2021 Takamomto, LLC

The following tutorial will demonstrate how to install a new version of RCFV, particularly when RCFV data files from a previous installation already exist.

If this is the first time you are installing RCFV (or if you have manually wiped the RCFV data files) the installation program will create default data files for the RCFV history and lookup data. The latter contains some universally useful templates, e.g., Google, Google News, Bing, Rotten Tomatoes, as well as some Spanish language translation entries which may be modified for different languages or deleted as per your needs. The history file comes with over 300 predefined urls, most of which have one or more related entries in the Filters folder.

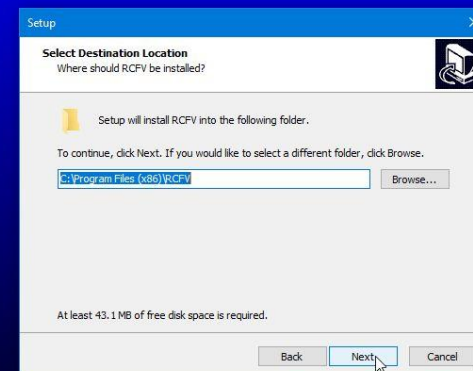

During a reinstallation RCFV will NOT overwrite any changes you have made to either the history data contained in **RCFV.Urls.txt** or to the default lookup data, **LookupText.txt** both of which are located in the Data folder. It will instead create parallel files with our latest values with the names, **RCFV.Urls.txt** and **LookupText.txt**. You can decide whether or how to update your own history and lookup data.

2018 Takamonto, LLC

RCFV

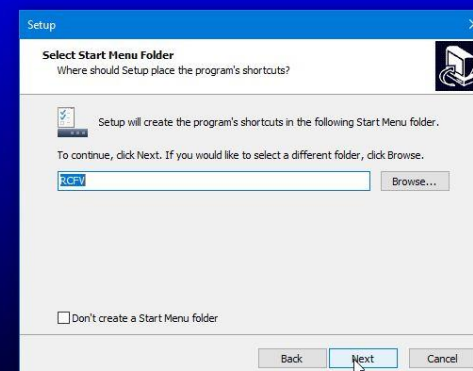

2018 Takamonto, LLC

RCFV

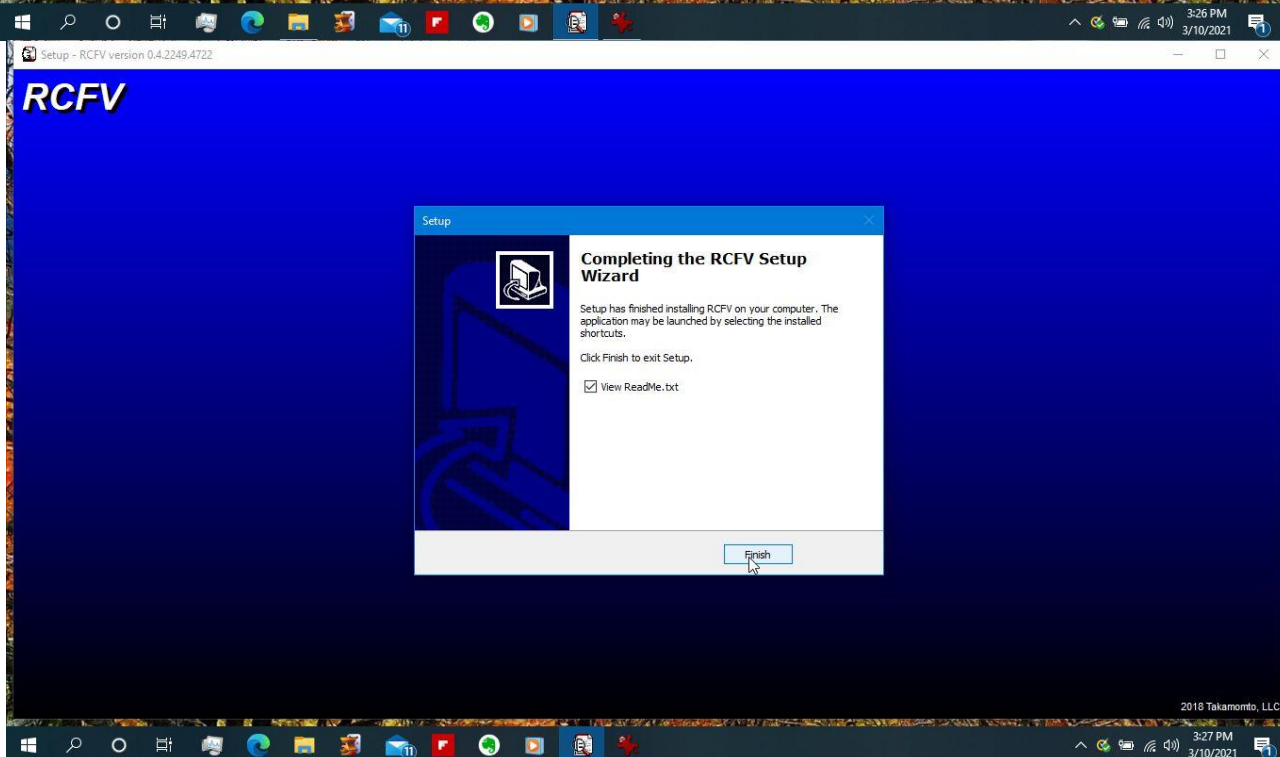

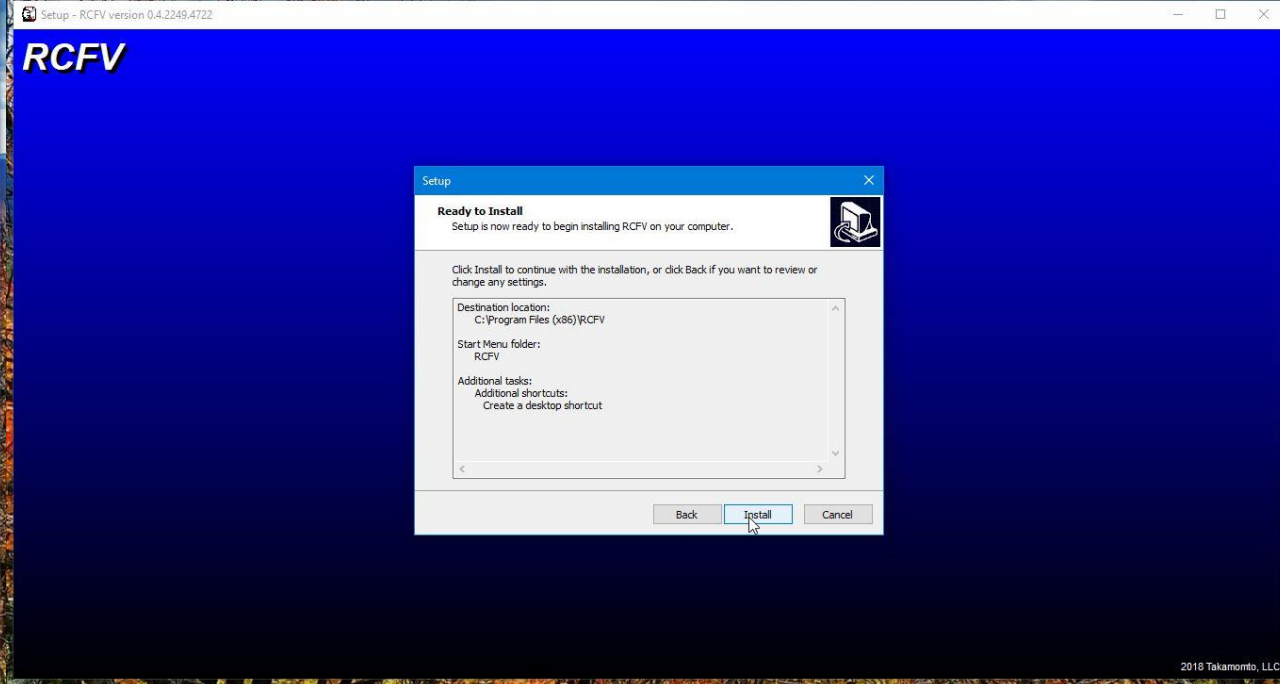

2018 Takamonto, LLC

RCFV

2018 Takamonto, LLC

Note that if the reinstallation tries to overwrite an existing **.fvf** (saved filter) file with a newer modification date you will be prompted whether to overwrite it or retain the existing value.

RCFV.Urls.txt.bak18	1/18/2021 11:59 AM	BAK18 File	39 KB

The RCFV installation will always create new files for the url history, **RCFV.Urls.install.txt**, and for the lookup, **LookupText.install.txt**. If they already exist from a previous install, they will be overwritten with the latest data. You can safely ignore these files, but you might want to include some of the new or updated data provided. For the lookup text you must manually compare **LookupText.install.txt** with the existing **LookupText.txt** and make any changes to the latter.

New urls plus their parameters from the "install" file will be added automatically. However, if the url already exists in the history file we must tell RCFV which url to use. If you have not made many changes to the **Web Options** parameters for the predefined urls which are stored in the history file such as the type of hyperlink, the maximum number of pages to read, image link inclusion, list spacing, etc. you probably will want to use the newest of the two which will reflect any changes we have made to the web page parameters. On the other hand, if you want to ensure that any url parameter changes you have made will be retained, then chose option 4.

Note that for importation the **Protected** attribute is ignored. It is designed to protect against automatic deletion, not updating.

RCFV -- Really Cool FiTeR Viewer, Version 0.4.2249-4.7.2.2 (3/9/2021 5:34 PM--3/7/2021 6:54 PM)

Choose what to do when importing a duplicate url.

Note that when importing duplicate url data the Protection attribute associated with the existing entry will be retained regardless of the attribute of the imported url. Also note that when the history data are overwritten all existing entries, whether protected or not, will be deleted before being replaced by the imported url data.

1 - Use the newer item

2 - Use the older item

3 - Always use the imported item

4 - Ignore any duplicate imported items

Select a menu entry by pressing the corresponding button or entering it's number using the keyboard.
Press the SPACEBAR to select an option if you use the TAB key to navigate the choices.

After the importation of all the new and newer urls, the history file has been updated to contain the latest url data.

Open url(s) in default browser

Enter a url in the input box at the top and/or select 1 or more urls from the list box at left. Press a button to open url(s) in RCFV or your browser or to delete them from the list.

Ordered by

☒ Most recent
☐ Url value

The Url list may ordered in reverse chronological order or in alphabetical order by host name.

Filter | Unfilter urls

Delete | Keep selected urls

PROTECT | unprotect urls

Export | Copy selected Urls

Import | Reload urls

Manage Urls

Use the filter option to select a set of Urls that you want to view or delete using a regular expression. Use the checkbox to indicate which items will be processed. You can also manually input a Url for viewing in the box at the top. If no manual Url is entered and no existing Urls are checked then the highlighted Url will be used.

In this brief tutorial we have shown how to deal with out of sync data when reinstalling RCFV after you have made modifications to the predefined urls or saved filter settings that are provided during the installation.

For the saved filter files, you have a more granular level of control over which filter files get overwritten and which do not. You will be queried during installation to accept or not each updated filter file that we provide.

The history data is an all or none affair and your selection depends on whether you have made any changes to the predefined urls in the history file. If you have changed many of the predefined parameters, then you are better off just keeping your changes.
