© 2018 - 2021 Takamomto, LLC

Using the Lookup Feature

The Really Cool FiTeR Viewer

© 2018 - 2021 Takamomto, LLC

In this presentation we will demonstrate the **Lookup** feature of RCFV which lets you easily do Google and other searches without having to create the full url. In fact, all you need do is specify the text that you want to search for. You can highlight the text within an RCFV file that you want to look up or, alternatively, enter one or more terms manually. You then select one or more items from among your predefined search templates to indicate which searches you want to make. The result is equivalent to creating the full url(s) with the search term(s) and opening them in RCFV or your browser.

The {F2} key is used for searching. If text is already highlighted in an existing document, it will be used for the search. If not, then if the cursor is positioned in a word, then that word will be used. If the cursor is positioned over whitespace, then you will be prompted for the search text. You can force such a manual search by pressing {Shift}+{F2} at any time.

Here is a web page from PC World. There is a word in one of the hyperlinks that might not be familiar so let's Google it.

Generally, you can just position the cursor in the word. Since the word is inside a hyperlink, we highlight it and then press {F2}.

{F2} will open the Lookup templates window defined in the Lookup tab of the Settings window. We will select Google. (Note, if this is the only search template we want to use, we don't have to check it; the highlight is sufficient).

Select a url template to use to look up: 'Haptic'

- NB: templates marked with *** do not work with RCFV files; use the default browser for them.

Select lookup urls by checking, then press a command button below. If no items are selected the highlighted item will be used. Press {Alt}+{F2} subsequently to reissue the next lookup with the previous templates and browser selection.

Open in default browser | **Open in RCFV** | Append to scratchpad | Cancel

The highlighted text, **Haptic**, will replace the ?? in the Google template creating the following url, <https://www.google.com/search?q=Haptic&num=100>
Now we just press the **Open in RCFV** button to get the results.

Web Page Options

<https://www.google.com/search?q=Haptic&num=100>

Link type

Standard Explicit Hidden *Links always start on a new line*

Choose "Explicit" if you want to filter on the value of the links. This will cause the link text to be visible as part of the text and preceded by ':':

Append all additional pages of this query to the new RCFV file

Maximum # pages to read. (0 = no limit)

You can choose to read a multipage url into a single file or to read each page into a separate file. Set the maximum number of pages to read to limit the number. Note that you can press the cancel button during the read to stop processing at the end of the latest query.

Append any subsequent url files in this request to the current file

If you select multiple urls to be read in one request (via dragging text containing 2 or more urls to the viewer or by highlighting 2 or more urls in the selection from the context menu) you can have them read into one viewer file by checking this option.

Automatically coalesce blank lines

Skip frames (may speed processing)

Ignore emphasis tags (bold, italics, etc.)

Display a border for borderless tables

Show hidden text (may be displayed automatically)

Don't display hidden text message delimiters

Include placeholders/urls for images

Fix up run-on text

Include unnamed/multi possibly abbreviated url

Maximum text width (0 = no limit) Use a non-zero value to reformat the text such that most lines will be no longer than the specified size. Using zero plus word-wrap gives you more formatting flexibility.

Maximum number of table columns Note that any columns beyond this number will be stacked vertically in the rightmost column (minimum = 1).

Maximum table column width (minimum = 20) This is used to limit the size of each table column. This is also used for blockquotes when the maximum text width = 0.

Compress

Right click the "Download..." button below to also run the program associated with the file extension, e.g., a PDF reader.

C:\Dropbox\RCFV\Downloads\search_q=Haptic&num=100

Here we have a complete url to do a Google search on the highlighted text which we will render with RCFV the normal way.

Here is the output of the Google search for **Haptic**.

..... Web results

Now let's do a more complicated, manual lookup. If we are at an empty screen or if the cursor is not positioned at a word (at the end of a line, for example) we can press {F2} as before. Pressing {Shift}+{F2}, though, will guarantee a manual lookup.

A Manual Lookup window will be displayed as seen below. Notice that in this mode we can search for multiple terms. In other words, each set of text separated by a '|' character will create a separate query.

Let's do a Wikipedia lookup of a few different kinds of saxophones. We will enter the text, "tenor sax|alto sax|baritone sax|soprano sax" into the input box and then press the {Enter} button or key.

RCFV -- Really Cool FITeR Viewer

[Manual Lookup]

In manual mode you can additionally specify multiple terms separated by the alternation character, '|', e.g.,
Apple | Microsoft | HP [the spaces are optional]

Multiple terms will be batched together as a normal multi-url query but all will use the same url template.

tenor sax|alto sax|baritone sax|soprano sax

{Enter}

Enter text in the input box and then press the {Enter} key to return the value.
You can also click on the {Enter} button to return the entered value.

{Shift}+{F2} opens this input box window. Enter the text in the input box and then press the {Enter} button or the {Enter} key.

This is the template window defined in the Lookup tab of the Settings window.

Select a url template to use to look up: 'tenor sax'

NB: templates marked with *** do not work with RCFV files; use the default

<input type="checkbox"/> [Google]	https://www.google.com/search?q=??&num=100

Select lookup urls by checking, then press a command button below. If no items are selected the h
{Alt}+{F2} subsequently to reissue the next lookup with the previous templates and browser select

We can select one or more of the templates to create our query or queries. Each of the options we specified in the manual lookup input text box will be used with each of the selected templates. The ?? string in each will be replaced with each of the search terms creating the full url.

In this case the four query terms will replace the ?? in the Wikipedia template creating, for the first term, the following url:

https://en.wikipedia.org/wiki/tenor_sax

In total 4 urls will be created. You can then choose whether to open them separately in your browser or in RCFV or combine them into one RCFV file.

Note that some web sites handle special characters in different ways. Wikipedia wants blanks to be specified as underscores. The text following the template url, [" " "_"], tells RCFV to do just that so that **tenor sax** becomes **tenor_sax** in the url.

Tenor saxophone - Wikipedia

***** Tenor saxophone *****

From Wikipedia, the free encyclopedia (Redirected from [Tenor sax](#))[Jump to navigation](#) [Jump to search](#)

The **tenor saxophone** is a medium-sized member of the [saxophone](#) family, a group of instruments invented by [Adolphe Sax](#) in the 1840s. The tenor and the [alto](#) are the two most commonly used saxophones. The tenor is pitched in the key of [B](#) (while the alto is pitched in the key of [E](#)), and written as a [transposing instrument](#) in the [treble clef](#) , sounding an octave and a [major second \[Interval \(music\)\]](#) lower than the written pitch. Modern tenor saxophones which have a high [F](#) key have a range from [A](#) [2] to [E](#) [5] (concert) and are therefore pitched one octave below the soprano saxophone. People who play the tenor saxophone are known as "tenor saxophonists", "tenor sax players", or "saxophonists".

The tenor saxophone uses a larger [mouthpiece](#) , [reed](#) and [ligature](#) than the [alto](#) and [soprano](#) saxophones. Visually, it is easily distinguished by the curve in its neck, or its [crook](#), near the mouthpiece. The alto saxophone lacks this and its neck goes straight to the mouthpiece. The tenor saxophone is most recognized for its ability to blend well with the soprano, alto and baritone saxophones, with its "husky" yet "bright" tone.

Tenor sax has been an important solo instrument in [jazz](#) music. Famous and influential players include [Coleman Hawkins](#) , [Lester Young](#) , [Ben Webster](#) , [Dexter Gordon](#) , [Wardell Gray](#) , [Stan Getz](#) , [Sonny Rollins](#) , [John Coltrane](#) and [Wayne Shorter](#) . The work of younger players such as [Michael Brecker](#) and [Chris Potter](#) has been an important influence in more recent jazz. [^][2]

Here is the output of the four queries. We have combined them into one file, the first screen of which is shown here.

***** History [[edit](#)] *****

The tenor saxophone is one of a [family](#) of fourteen instruments designed and constructed in 1846 by [Adolphe Sax](#) , a [Belgian](#) -born instrument maker, [flautist](#) and [clarinetist](#) . Based on an amalgam of ideas drawn from the [clarinet](#) , [flute](#) , [oboe](#) and [ophicleide](#) , the saxophone was intended to form a tonal link between the [woodwinds](#) and [brass instruments](#) found in [military bands](#) , an area that Sax considered sorely lacking. Sax's patent, granted on 28 June 1846, divided the family into two groups of seven instruments, each ranging from alto down to contrabass. One family, pitched alternatively in [B](#) and [E](#) , was designed specifically to integrate with the other instruments then common in military bands. The tenor saxophone, pitched in [B](#) , is the fourth member of this family.

***** Description [[edit](#)] *****

Tenor (left) and [soprano saxophones](#) , showing their comparative sizes

The tenor saxophone, like all saxophones, consists of an approximately conical tube of thin brass, a type of metal. The wider end of the tube is flared slightly to form a [bell](#) , while the narrower end is connected to a single reed mouthpiece similar to that of the clarinet. At intervals down the bore are placed between 20 and 23 [tone holes](#) ; these are covered by pads which can be pressed onto the holes to form an airtight seal. There are also two small speaker holes which, when opened, disrupt the lower [harmonics](#) of the instrument and cause it to [overblow](#) into an [upper register](#) . The pads are controlled by pressing a number of keys with the fingers of the left and right hands; the left thumb controls an [octave key](#) which opens one or other of the speaker holes. The original design of tenor saxophone had a separate octave key for each speaker hole, in the manner of the [bassoon](#) ; the mechanism by which the correct speaker hole is selected based on the fingering of the left hand (specifically the left [ring finger](#)) was developed soon after Sax's patent expired in 1866.

Although a handful of novelty tenors have been constructed 'straight', like the smaller members of the saxophone family, the unwieldy length of the straight configuration means that almost all tenor saxophones feature a 'U-bend' above the third-lowest tone hole which is characteristic of the saxophone family. The tenor saxophone is also curved at the top, above the highest tone-hole but below the highest speaker hole. While the [alto](#) is usually bent only through 80-90° to make the mouthpiece fit more easily in the mouth, the tenor is usually bent a little more in this section, incorporating a slight S-bend.

The [mouthpiece](#) of the tenor saxophone is very similar to that of the clarinet, an approximately wedge-shaped tube, open along one face and covered in use by a thin strip of material prepared from the stem of the giant cane ([Arundo donax](#)) commonly known as a [reed](#) . The reed is shaved to come to an extremely thin point, and is clamped over the mouthpiece by the use of a [ligature](#) . When air is blown through the mouthpiece, the reed vibrates and generates the [acoustic resonances](#) required to produce a sound from the instrument. The mouthpiece is the area of the saxophone with the greatest flexibility in shape and style, so the [timbre](#) of the instrument is primarily determined by the dimensions of its mouthpiece. The design of the mouthpiece and reed play a big role in how a saxophone sounds. Classical mouthpieces generally help produce a warmer and rounder tone, while jazz mouthpieces generally help produce a brighter and edgier tone. Materials used in mouthpiece construction include [plastic](#) , [ebonite](#) and various metals e.g. [bronze](#) , [brass](#) and [stainless steel](#) .

The mouthpiece of the tenor saxophone is proportionally larger than that of the alto, necessitating a similarly larger [reed](#) . The increased stiffness of the reed and the greater airflow required to establish resonance in the larger body means the tenor sax requires greater lung power but a looser [embouchure](#) than the higher-pitched members of the saxophone family. The tenor sax reed is similar in size to that used in the [bass clarinet](#) , so the two can be easily substituted.

The baritone saxophone was created in 1946 by the Belgian instrument maker **Adolphe Sax** as one of a family of 14 instruments. Sax believed these instruments would provide a useful tonal link between the woodwinds and brasses. The family was divided into two groups of seven saxophones each, from the soprano to the contrabass. Though a design for an F baritone saxophone is included in the C and F families of saxophones, no baritone saxophones exist. The family consisting of saxophones in the keys of B \flat and E \flat was more successful because of their popularity in military bands, and the E \flat -baritone is the fifth member of this

' or because of personal preference for a particular vintage instrument. Some also believe low B \flat horns sound inferior in the low range, however this is the subject of debate among players.

The baritone saxophone's relatively large mass (11 to 30 pounds or 5.0 to 9.1 kilograms, depending on the manufacturer's choice of material and structural design, and whether it has a low B \flat) has led to the development of harness-style alternatives to neckstraps which distribute the instrument's weight across

A number of jazz performers have used the baritone saxophone as their primary instrument. It is part of standard big band instrumentation (the larger **baritone saxophone** was also occasionally used up until the 1940s). As phrased by **Alain Cuppar** from **JazzSaxBar.com**: "Used a few times in contemporary classical music... it is especially in jazz that this wonderful instrument feels most comfortable." One of the instrument's pioneers was **Harry Carney**, longtime baritone saxophone player in the **Duke Ellington** band.

Since the mid-1950s, baritone saxophone soloists such as **Harry Milligan**, **Cecil Payne**, and **Reggie Adams** achieved fame, while **George Chakoff** was the first baritone saxophone player to achieve fame as a **bebop** soloist. In free jazz, **Peter Brötzmann** is notable.

A noted Scottish performer is **Joe Wegerlar**, who has appeared with **Hughy Hatfield** as well as with the **Linncoch Center Jazz Orchestra**.

sacks, occasionally one-piece instruments are bent during manufacturing above the octave key (e.g., the **Yamaha Y24-K2R** and **Y24-2020**). Some manufacturers also produce fully curved soprano (which look much like a small alto saxophone with a straight neck/neck), as well as 'tipped-ball' soprano which are straight but have the bell angled upward somewhat and are typically used with a curved neck (these are often called 'assholes' for their resemblance to the somewhat rare **Saxello** model produced by **King** in the 1970s, though an actual Saxello's bell is angled more and its bore is different). All variants have the same keys and range as the traditional straight soprano, but as with the necks, some players believe curved and tipped-ball soprano sound warmer and less nasal.

More recent notable performers include **Samuel Blumenthal** (who has also led a group of baritone saxophone players), **John Simon**, **Scott Robinson**, **James Carter**, **Baritone "Doc" Fugla** of the band **Towers of Power**, **Rich Rodriguez**, **Gary Smulyan**, **Brian Landrow**, and **Ronnie Cuber**. In the avant-garde scene, **Tim Berne** has doubled on bass, **John Zorn** plays **San Balladino** of **Lonely Chop** and **Two Many Twoz** has become popular with younger listeners for his aggressive playing style and energetic performances.

***** The instrument [**edit**] *****

A **transposing instrument** pitched in the key of B \flat with a high F \flat – key have a range from concert A \flat (F \flat) and are therefore pitched one octave above like a **soprano saxophone pitched in C**, which is not bent since around 1940.

Due to the higher pitch of the soprano, it is more sensitive with respect to **intonation** than the lower saxophones, so a player must have more skill with breath support (diaphragmatic breathing), tongue and soft palate position, and embouchure (collectively known as voicing). It is also less forgiving of poor technique than the other saxophones. This has led to the common belief that

Now let's do another manual lookup only this time we will lookup a single term but use it with a couple of templates to get some different information. Pressing **{Shift}+{F2}** again will get to the manual lookup.

This time let's enter "covid" into the input box and then press the **{Enter}** button or key.

RCFV -- Really Cool FiTeR Viewer

[Manual Lookup]

In manual mode you can additionally specify multiple terms separated by the alternation character, '|', e.g.,

Apple | Microsoft | HP **[the spaces are optional]**

Multiple terms will be batched together as a normal multi-url query but all will use the same url template.

covid **{Enter}**

Enter text in the input box and then press the {Enter} key to return the value.
You can also click on the '{Enter}' button to return the entered value.

Select a url template to use to look up: 'covid'

NB: templates marked with *** do not work with RCFV files; use the default browser for them.

--- Updated: 2021-01-24	

Select lookup urls by checking, then press a command button below. If no items are selected the highlighted item will be used. Press {Alt}+(F2) subsequently to reissue the next lookup with the previous templates and browser selection.

In this case we will create multiple queries with a single term and multiple lookup templates. Click on the two (or more) templates that are needed and then press **Open in RCFV**.

We want to combine text from two different web sites, Google and Google News.

RCFV -- Really Cool FiTeR Viewer, Version 0.3.2240-4.7.1.7 (11/29/2020 11:38 PM--11/25/2020 5:19 PM)

1 - Choose which of the selected urls to read/download in RCFV or in the default browser

2 - Combine all selected urls into one RCFV file

3 - Read all the selected urls in the default browser

4 - Cancel

*Select a menu entry by pressing the corresponding button or entering it's number using the keyboard.
Press the SPACEBAR to select an option if you use the TAB key to navigate the choices.*

It is recommended that you do not use automatic filtering when combining urls from different sites.

If all of the urls are from the same host then 'automatic filtering' is more likely to be effective.

1 - Skip automatic filtering for this query

2 - Use automatic filtering

*Select a menu entry by pressing the corresponding button or entering it's number using the keyboard.
Press the SPACEBAR to select an option if you use the TAB key to navigate the choices.*

Since the web sites are from different, albeit similar, domains their formatting is almost certainly going to be different. Since **automatic filtering** is specified, we want to turn it off for this specific query set, so we don't have inappropriate filtering.

We will manually select the filter once the text has been displayed.

Web Page Options

<https://www.google.com/search?q=covid&num=100>

Link type
 Standard Explicit Hidden
 Links always start on a new line

Choose "Explicit" if you want to filter on the value of the links. This will cause the link text to be visible as part of the text and preceded by ':':

Append all additional pages of this query to the new RCFV file
Maximum # pages to read. (0 = no limit)
You can choose to read a multipage url into a single file or to read each page into a separate file. Set the maximum number of pages to read to limit the number. Note that you can press the cancel button during the read to stop processing at the end of the latest query.

Append any subsequent url files in this request to the current file
If you select multiple urls to be read in one request (via dragging text containing 2 or more urls to the viewer or by highlighting 2 or more urls in the viewer and choosing to read all the urls in the selection from the context menu) you can have them read into one viewer file by checking this option.

Automatically coalesce blank lines
 Skip frames
 Ignore empty elements
 Display a table of contents
 Show hidden automatic links
 Don't use automatic delimiters
 Include possibly abbreviated urls by the name
 Fix up run-on sentences
 Include urls possibly abbreviated by the name

Maximum text width (0 = no limit) Use a non-zero value to reformat the text such that most lines will be no longer than the specified size. Using zero plus word-wrap gives you more formatting flexibility.

Maximum number of table columns Note that any columns beyond this number will be stacked vertically in the rightmost column (minimum = 1).

Maximum table column width (minimum = 20) This is used to limit the size of each table column. This is also used for blockquotes when the maximum text width = 0.

Prompt for web parameters for subsequent web files when multiples are selected.

Right click the "Download..." button below to also run the program associated with the file extension, e.g., a PDF reader.

C:\Dropbox\RCFV\Downloads\search_q=covid&num=100

Here is the first of the two queries, the Google search. We are combining this with the next query, so we don't need to prompt for the next query's web page options.

Covid-19 Live News and Updates.

11 mins ago

[Science Magazine .](#)

'Absolutely remarkable': No one who got Moderna's vaccine in trial developed severe COVID-19.

10 hours ago

[The Wuhan files.](#)

35 mins ago

[Daily change](#)

[New cases](#)

[New cases](#)

[Deaths](#)

[United States](#)

[Worldwide](#)

[Afghanistan](#)

[...land Islands](#)

[Albania](#)

[Algeria](#)

[Andorra](#)

Here is the first screen of the combined queries with only the default {F4} filtering. {F4} filtering is optional but may be used, when there is no automatic filtering, to initially position the cursor at the beginning of the first “reasonably-sized” block of text.

We will want to select a predefined filter that will accommodate both the Google search and the Google News text.

We want to overwrite any existing filter settings for the queries and use the predefined fonts and colors as well.

RCFV -- Really Cool FiTeR Viewer, Version 0.3.2240-4.7.1.7 (11/29/2020 11:38 PM--11/25/2020 5:19 PM)

You can replace the existing filter settings or merge the saved settings with existing ones.

Or, you can also just replace the current file's font and color settings and leave the filter settings alone.

Note that the current font and color settings are always replaced.

1 - Replace filter settings, colors, and fonts

2 - Merge (add) saved filter settings, colors, and fonts

3 - Uppdate colors and fonts only

4 - Cancel

*Select a menu entry by pressing the corresponding button or entering it's number using the keyboard.
Press the SPACEBAR to select an option if you use the TAB key to navigate the choices.*

Here is the first page of the Google search.

Now let's do another manual lookup only this time we will lookup multiple terms and use them with a couple of templates to create four searches. Pressing **{Shift}+{F2}** again will get to the manual lookup.

This time let's lookup "Elon Musk" and "Jeff Bezos" by entering each term into the input box separated by '|' and then press the **{Enter}** button or key.

RCFV -- Really Cool FiTeR Viewer

[Manual Lookup]

In manual mode you can additionally specify multiple terms separated by the alternation character, '|', e.g.,

Apple | Microsoft | HP [the spaces are optional]

Multiple terms will be batched together as a normal multi-url query but all will use the same url template.

Elon Musk | Jeff Bezos

{Enter}

Enter text in the input box and then press the {Enter} key to return the value.
You can also click on the '{Enter}' button to return the entered value.

We are going to use both Google and Bing for the two rich guys. We will read the data using RCFV and combine the output into a single file.

Select a url template to use to look up: 'Elon Musk|Jeff Bezos'

<input type="checkbox"/>	[NB: templates marked with *** do not work with RCFV files; use the default browser for them.]

The Really Cool FiLTeR Viewer

© 2018 - 2021 Takamomto, LLC

Let's look at using Lookup with two different web searches. We are going to use a Google search to find a site containing all the Beatles published songs ordered by their music critics. Then we will extract the top 5 songs from their list and do a Wikipedia lookup for each of the songs.

First let's do a manual lookup of **Beatles songs**.

[Manual Lookup]

In manual mode you can additionally specify multiple terms separated by the alternation character, '|', e.g.,

Apple | Microsoft | HP [the spaces are optional]

Multiple terms will be batched together as a normal multi-url query but all will use the same url template.

Enter text in the input box and then press the {Enter} key to return the value.
You can also click on the '{Enter}' button to return the entered value.

- NB: templates marked with *** do not work with RCFV files; use the default browser for them.

We are going to do a Google search and open the results in RCFV.

Select lookup urls by checking, then press a command button below. If no items are selected the highlighted item will be used. Press {Alt}+[F2] subsequently to reissue the next lookup with the previous templates and browser selection.

Open in default browser Open in RCFV Append to scratchpad Cancel

Web Page Options

<https://www.google.com/search?q=Beatles%20songs&num=100>

Link type

Standard Explicit Hidden *Links always start on a new line*

Choose "Explicit" if you want to filter on the value of the links. This will cause the link text to be visible as part of the text and preceded by '::'.

Append all additional pages of this query to the new RCFV file

Maximum # pages to read. (0 = no limit)

You can choose to read a multipage url into a single file or to read each page into a separate file. Set the maximum number of pages to read to limit the number. Note that you can press the cancel button during the read to stop processing at the end of the latest query.

Append any subsequent url files in this request to the current file

If you select multiple urls to be read in one request (via dragging text containing 2 or more urls to the viewer or by highlighting 2 or more urls in the viewer and choosing to read all the urls in the selection from the context menu) you can have them read into one viewer file by checking this option.

Automatically coalesce blank lines

Skip frames (may speed processing)

Ignore emphasis tags (bold, italics, etc.)

Display a border for borderless tables

Show hidden text (may be displayed automatically)

Don't display hidden text message delimiters

Include placeholders/urls for images

Fix up run-on text

Include unnamed/multimedia links using a possibly abbreviated url as the name

Maximum text width (0 = no limit) Use a non-zero value to reformat the text such that most lines will be no longer than the specified size. Using zero plus word-wrap gives you more formatting flexibility.

Maximum number of table columns Note that any columns beyond this number will be stacked vertically in the rightmost column (minimum = 1).

Maximum table column width (minimum = 20) This is used to limit the size of each table column. This is also used for blockquotes when the maximum text width = 0.

List spacing

Single Double Compress

Right click the "Download..." button below to also run the program associated with the file extension, e.g., a PDF reader.

C:\Dropbox\RCFV\Downloads\search_q=Beatles_songs&num=100

C:\Dropbox\RCFV\Downloads\every-beatles-song

We also judged the songs based on their officially released version, which was either shorter than a minute on that album, longer (and better) version. We should also note it was way more difficult putting many great songs in their catalog, uncovering "lesser" ones once in a while.

227. "You Know What to Do," Anthology 1 (1995)

When Harrison finally hit his stride, he became the Beatles' ace in the hole. **Night**, shows why his songs were still being passed over at this point.

226. "That Means a Lot," Anthology 2 (1996)

A McCartney-penned song from the **Help!** sessions it didn't make the final cut.

225. "Junk," Anthology 3 (1996)

224. "Step Inside Love/Los Paranoias," Anthology 3 (1996)

Two McCartney recordings from the White Album see the **McCartney** album; "Step Inside Love" (given really) feature help from Lennon and Starr.

223. "Teddy Boy," Anthology 3 (1996)

"Teddy Boy" was attempted several times during the **Let It Be** sessions. McCartney later fine-tuned it for

This is the unfiltered data from the url we selected. We see that the format of the song name consists of a number followed by a period, a space, a quotation mark, the name of the song, a comma, and, finally, a closing quotation mark.

We see that the songs are displayed in a different color from the regular text. We can press the {c} key to see and/or set the current colors for this file. The songs are being displayed with the **Emphasis** color (this is the color applied to text which has been bolded, italicized, etc. in the original HTML). RCFV uses a special control character, ², to indicate the start of emphasized text. To verify this, we have dragged the highlighted line to the scratchpad which will reveal the special characters.

Set colors for this file index

Select which color to change:

 200. "Dig It," Let It Be (1970)
 199. "Words of Love," Beatles for Sale (1964)

Here is the filter setting to select and extract the name of each song:

`(?<=^2\d+\.\s").*(?=,)"`

Note that the expressions inside of parentheses are lookbehind and lookahead expressions which must be matched but are not included in the matched value. In this case the matched text will be the text between the first quotation mark and the comma.

The screenshot shows the RCFV software interface. The main window displays a list of 227 Beatles songs. The bottom panel contains several toolbars and panels:

- Format:** Shows font settings (Courier New, size 18) and options like 'Wrap' and 'Freeze current file'.
- Find:** Includes search options like 'Case sensitive', 'Whole word', and 'Multi-file'.
- Filters:** The 'Include' filter is active, with the expression `(?<=^2\d+\.\s").*(?=,)"` entered. The 'Exclude' filter is also visible but empty.
- File List:** Shows '0-Origins' with 107,770 items, currently displaying item 53,884.
- Navigation:** Buttons for 'First File', 'Prev File', 'Next File', and 'Last File' are visible.
- Footer:** Copyright information: 'RCFV by Anthony Zackin, Copyright © 2018 Takamomto, LLC'.

- 227. "You Know What to Do," Anthology 1 (1995)
- 226. "That Means a Lot," Anthology 2 (1996)
- 225. "Junk," Anthology 3 (1996)
- 224. "Step Inside Love/Los Paranoias," Anthology 1 (1995)
- 222. "12-Bar Original," Anthology 2 (1996)
- 221. "Tell Me What You See," Help! (1965)
- 220. "Misery," Please Please Me (1963)
- 219. "Ask Me Why," Single (1963)

Right-clicking the Refresh button will, in addition to doing a refresh, copy all matched text into the scratchpad, each match on a new line.

- 212. "If You've Got Trouble," Anthology 1 (1995)
- 211. "How Do You Do It?," Anthology 1 (1995)

Pepper's Lonely Hearts Club Band, All My Loving, Girl, The Fool on the Hill, Julia, Drive My Car, Sexy Sadie, Hey Bulldog, Back in the U.S.S.R., Hello Goodbye, And Your Bird Can Sing, Eight Days a Week, I Feel Fine, Twist and Shout, Love Me Do, She Said She Said, Nowhere Man, Don't Let Me Down, For No One, I'm Only Sleeping, Here, There and Everywhere, Dear Prudence, She's Leaving Home, Taxman, The Long and Winding Road, I Want You (She's So Heavy), Day Tripper, We Can Work It Out, Can't Buy Me Love, With a Little Help From My Friends, Get Back, Blackbird, You've Got to Hide Your Love Away, Please Please Me, Rain, Golden Slumbers" / "Carry That Weight" / "The End, I Saw Her Standing There, Across the Universe, Lucy in the Sky With Diamonds, Here Comes the Sun, Happiness Is a Warm Gun, All You Need Is Love, Paperback Writer, Revolution 1," The Beatles / "Revolution, Norwegian Wood (This Bird Has Flown), Helter Skelter, A Hard Day's Night, Ticket to Ride, Come Together, I Am the Walrus, Something, Penny Lane, Let It Be, Eleanor Rigby, While My Guitar Gently Weeps, Help!, In My Life, Tomorrow Never Knows, She Loves You, Yesterday, I Want to Hold Your Hand, Hey Jude, Strawberry Fields Forever, A Day in the Life

The screenshot shows the RCFV software interface. The 'Find' window is active, displaying a search filter: `(?<=^2)d+,\s)?.*(?=,)`. The 'Filters' window shows a list of files, including 'Help!', 'In My Life', 'Tomorrow Never Knows', 'She Loves You', 'Yesterday', 'I Want to Hold Your Hand', 'Hey Jude', 'Strawberry Fields Forever', and 'A Day in the Life'. The 'Format' window shows settings for font size (18) and font type (Courier New). The 'File List' window shows a list of files with columns for size, name, and font type.

Just to show what was matched we have copied the extracted text from the scratchpad and modified it replacing the newline characters with a comma and a space. These are the songs that exist, one per line, in the scratchpad.

- 27. "Across the Universe," Let It Be (1970)
- 26. "Lucy in the Sky With Diamonds," Sgt. Pepper's Lonely Hearts Club Band (1967)
- 25. "Here Comes the Sun," Abbey Road (1967)
- 24. "Happiness Is a Warm Gun," Sgt. Pepper's Lonely Hearts Club Band (1967)
- 23. "All You Need Is Love," Sgt. Pepper's Lonely Hearts Club Band (1967)
- 22. "Paperback Writer," Sgt. Pepper's Lonely Hearts Club Band (1967)
- 21. "Revolution 1," Sgt. Pepper's Lonely Hearts Club Band (1967)
- 20. "Norwegian Wood (This Bird Has Flown)," Rubber Soul (1965)
- 19. "Helter Skelter," The Beatles (1968)
- 18. "A Hard Day's Night," A Hard Day's Night (1964)
- 17. "Ticket to Ride," Help! (1965)
- 16. "Come Together," Abbey Road (1969)
- 15. "I Am the Walrus," Magical Mystery Tour (1967)
- 14. "Something," Abbey Road (1969)
- 13. "Penny Lane," Single (1967)
- 12. "Let It Be," Single (1970)
- 11. "Eleanor Rigby," Revolver (1966)
- 10. "While My Guitar Gently Weeps," The Beatles (1968)
- 9. "Help!," Help! (1965)
- 8. "In My Life," Rubber Soul (1965)
- 7. "Tomorrow Never Knows," Revolver (1966)
- 6. "She Loves You," Single (1963)
- 5. "Yesterday," Help! (1965)
- 4. "I Want to Hold Your Hand," Single (1963)
- 3. "Hey Jude," Single (1968)
- 2. "Strawberry Fields Forever," Single (1967)
- 1. "A Day in the Life," Sgt. Pepper's Lonely Hearts Club Band (1967)

We have highlighted the last 5 lines of the scratchpad which correspond to the critics' 5 favorite Beatles' songs.

We have opened the context menu and we will select the swap CrLf command which will exchange newline characters with "|" in the highlighted text.

- Read file into scratchpad
- Append file to scratchpad
- Write scratchpad to file
- Append scratchpad to file
- Toggle word-wrap Shift+Ctrl+W

- 14. "Something," Abbey Road (1969)
- 13. "Penny Lane," Single (1967)
- 12. "Let It Be," Single (1970)
- 11. "Eleanor Rigby," Revolver (1966)
- 10. "While My Guitar Gently Weeps," The Beatles (1968)
- 9. "Help!," Help! (1965)
- 8. "In My Life," Rubber Soul (1965)
- 7. "Tomorrow Never Knows," Revolver (1966)
- 6. "She Loves You," Single (1963)
- 5. "Yesterday," Help! (1965)
- 4. "I Want to Hold Your Hand," Single (1963)
- 3. "Hey Jude," Single (1968)
- 2. "Strawberry Fields Forever," Single (1967)
- 1. "A Day in the Life," Sgt. Pepper's Lonely Hearts Club Band (1967)

The **Swap** command will create the following string which we will then **Copy**:

Yesterday|I Want to Hold Your Hand|Hey Jude|Strawberry Fields Forever|A Day in the Life

The screenshot shows the RCFV software interface. At the top, there's a menu bar with options like 'Format', 'Find', 'Filters', and 'Help!'. Below the menu bar, there are several panels: 'Format' (with options for wrap, no wrap, hex, hex2), 'Find' (with search criteria), 'Filters' (with include and exclude filters), and a main display area. The main display area shows a list of Beatles songs, with the output string 'Yesterday|I Want to Hold Your Hand|Hey Jude|Strawberry Fields Forever|A Day in the Life' highlighted in yellow. At the bottom, there's a footer with the text 'RCFV by Anthony Zackin, Copyright © 2018 Takamomto, LLC'.

We press **{Shift}+{F2}** to bring up the manual lookup input box and then paste the copied text into it and then press **{Enter}**.

RCFV -- Really Cool FiTeR Viewer

[Manual Lookup]

In manual mode you can additionally specify multiple terms separated by the alternation character, '|', e.g.,

Apple | Microsoft | HP [the spaces are optional]

Multiple terms will be batched together as a normal multi-url query but all will use the same url template.

Yesterday|I Want to Hold Your Hand|Hey Jude|Strawberry Fields Forever|A Day in the Life

{Enter}

Enter text in the input box and then press the {Enter} key to return the value.
You can also click on the '{Enter}' button to return the entered value.

This time we want to do a Wikipedia search on the 5 songs and combine the results in one RCFV file.

RCFV -- Really Cool FiTeR Viewer, Version 0.3.2244-4.7.1.9 (1/22/2021 2:13 PM-- /17/2021 3:03 PM)

1 - Choose which of the selected urls to read/download in RCFV or in the default browser

2 - Combine all selected urls into one RCFV file

3 - Read all the selected urls in the default browser

4 - Cancel

Select a menu entry by pressing the corresponding button or entering it's number using the keyboard. Press the SPACEBAR to select an option if you use the TAB key to navigate the choices.

Select lookup urls by checking, then press a command button below. If no items are selected the highlighted item will be used. Press {Alt}+{F2} subsequently to reissue the next lookup with the previous templates and browser selection.

Open in default browser

Open in RCFV

Append to scratchpad

Cancel

Web Page Options

<https://en.wikipedia.org/wiki/Yesterday>

Link type

Standard Explicit Hidden *Links always start on a new line*

Choose "Explicit" if you want to filter on the value of the links. This will cause the link text to be visible as part of the text and preceded by ':':

Append all additional pages of this query to the new RCFV file

Maximum # pages to read. (0 = no limit)

You can choose to read a multipage url into a single file or to read each page into a separate file. Set the maximum number of pages to read to limit the number. Note that you can press the cancel button during the read to stop processing at the end of the latest query.

Append any subsequent url files in this request to the current file

If you select multiple urls to be read in one request (via dragging text containing 2 or more urls to the viewer or by highlighting 2 or more urls in the viewer and choosing to read all the urls in the selection from the context menu) you can have them read into one viewer file by checking this option.

Automatically coalesce blank lines

Skip frames (may speed processing)

Ignore emphasis tags (bold, italics, etc.)

Display a border for borderless tables

Show hidden text (may be displayed automatically)

Don't display hidden text message delimiters

Include placeholders/urls for images

Fix up run-on text

Include unnamed/multimedia links using a possibly abbreviated url as the name

Maximum text width (0 = no limit) Use a non-zero value to reformat the text such that most lines will be no longer than the specified size. Using zero plus word-wrap gives you more formatting flexibility.

Maximum number of table columns Note that any columns beyond this number will be stacked vertically in the rightmost column (minimum = 1).

Maximum table column width (minimum = 20) This is used to limit the size of each table column. This is also used for blockquotes when the maximum text width = 0.

Prompt for web parameters for subsequent web files when multiples are selected.

List spacing

Single Double Compress

C:\Dropbox\RCFV\Downloads\Yesterday

Here is the first url to be read.

..... Film and TV [edit

{#FILM#}

Unfortunately, we are not done. "Yesterday" is a little too general and needs some disambiguation, as Wikipedia likes to say.

To fix the problem, first let's clear the scratchpad. We don't have to do this, but it will make things easier.

We've displayed the quick keys Hover Help to show that, within the viewer itself, you can clear the scratchpad by pressing {Alt}+{Shift}+{S}. We can also do it within the scratchpad itself by using the context menu and selecting **Clear scratchpad** or pressing {Shift}+{Ctrl}+{A}.

Once we've cleared the scratchpad, we will append the combined urls to the scratchpad using the {d} key as shown in the Hover Help.

The screenshot shows the left sidebar of the RCFV application. It contains a table of contents with sections for '1 Film and TV', '2 Music', and '3 Other'. Below the table of contents are navigation buttons for 'add files', 'remove files', 'internet / HTML', 'Mail', 'File List = 3', 'File Offset', 'Buffer Size +200', 'Exit (Alt) + (F4)', and 'Copy or edit'. There are also buttons for 'First File', 'Prev File', 'Next File', 'Last File', 'Refresh (F5)', and 'Auto Refresh On'.

The screenshot shows the 'Viewer Quick Keys' help window. It lists various keyboard shortcuts and their equivalent mouse functions. Two entries are highlighted with red boxes: '{d}/{D}' which is 'Append to scratchpad / Copy to clipboard: current document name(s) (files or urls)', and '{Alt}+{S}' which is 'Clears the scratchpad (Note: this means {Alt}+{Shift}+{s})'.

The screenshot shows a context menu for the scratchpad. The menu items include: 'Read file into scratchpad', 'Append file to scratchpad', 'Write scratchpad to file', 'Append scratchpad to file', 'Toggle word-wrap', 'Copy scratchpad text to external editor', 'Clear scratchpad', 'Select all', 'Copy', 'Cut', 'Paste', 'Paste append', 'Paste replace', 'Escape Highlighted Text', and 'Swap CrLf & '| (create/remove alternation)'. A red arrow points from the text in the main document to the 'Clear scratchpad' option in this menu.

is Forever|A Day in the Life

Yesterday (Beatles song) - Wikipedia

..... Yesterday (Beatles song)

From Wikipedia, the free encyclopedia

[Jump to navigation](#) [Jump to search](#)

"**Yesterday**" is a song by the English [rock](#) band [the Beatles](#), written by [Paul McCartney](#) and credited to [Lennon-McCartney](#). It was first released on the album [Help!](#) in August 1965, except in the United States, where it was issued as a [single](#) in September. The song reached number one on the US charts. It subsequently appeared on the UK EP [Yesterday](#) in March 1966 and made its US album debut on [Yesterday and Today](#), in June 1966.

McCartney's vocal and [acoustic guitar](#), together with a [string quartet](#), essentially made for the first solo performance of the band. It remains popular today and, with more than 2,200 [cover versions](#), ^[2] is one of the most covered songs in the history of recorded music. ^[note1] "Yesterday" was voted the best song of the 20th century in a 1999 [BBC Radio 2](#) poll of music experts and listeners and was also voted the No. 1 pop song of all time by [MTV](#) and [Rolling Stone](#) magazine the following year. In 1997, the song was inducted into the [Grammy Hall of Fame](#). [Broadcast Music Incorporated](#) (BMI) asserts that it was performed over seven million times in the 20th century. ^[4]

"Yesterday" is a melancholy [ballad](#) about the break-up of a relationship. The singer nostalgically laments for yesterday when he and his love were together, before she left because of something he said. ^[5] McCartney is the only member of the Beatles to appear on the track. The final recording was so different from other works by the Beatles that the band members vetoed the release of the song as a single in the United Kingdom, although other artists were quick to record versions of it for single release. The Beatles recording was issued as a single there in 1976 and peaked at number 8.

..... Contents

Notice that the order of the urls has changed. Since we didn't reorder them, let's search for the **Yesterday** song in the combined file to show that we now have what we want.

The screenshot shows the RCFV interface with the following components:

- Format:** 1, 1.5, 2, Freeze current file, Buffer line numbers.
- Find:** Search term: "Yesterday (Beatles song)".
- Filters:** Includes filters for Visual spaces, Case Sensitive, AND The List, and Exclude.
- Search Results (Yellow Box):**
 - https://en.wikipedia.org/wiki/I_Want_to_Hold_Your_Hand
 - https://en.wikipedia.org/wiki/Hey_Jude
 - https://en.wikipedia.org/wiki/Strawberry_Fields_Forever
 - https://en.wikipedia.org/wiki/A_Day_in_the_Life
 - http://en.wikipedia.org/wiki/Yesterday_(Beatles_song)
- Footer:** RCFV by Anthony Zackin, Copyright © 2018 Takamomto, LLC

Now let's look at using Lookup for the very common case of language translation. We are going to use Lookup to open a browser tab with the translation of a word or text while reading an RCFV file. If you just want a quick answer, this is the most efficient way. If you want to capture a subset of the web page via filtering, then you would probably want to read it into RCFV.

First, we'll open a text file and then use Lookup to translate some of the text into Spanish. We have supplied templates for various language translation sites which can easily be modified for different languages.

CRISPR - Wikipedia

..... CRISPR

From Wikipedia, the free encyclopedia
(Redirected from [Crispr](#)) [Jump to navigation](#) Jump to search This article is about the prokaryotic antiviral system. For the use in editing genes, see [CRISPR gene editing](#) .

CRISPR (/ [DNA](#) sequenc [DNA](#) fragment bacteriophage system of prokaryotes (**clustered regularly interspaced short palindromic repeats**) is a family of organisms such as [bacteria](#) and [archaea](#) . ^[2] These sequences are derived from infected the prokaryote. They are used to detect and destroy DNA from similar these sequences play a key role in the antiviral (i.e. anti-phage) defense

Now let's translate a paragraph of text using Google translate.
We have highlighted a paragraph to translate, opened the context menu, and we will select **Lookup**, or you could just press {F2}.

- Open all urls in the selected text in RCFV
- Open all urls in the selected text in a browser window
- Open all urls in the selected text in Outline in a browser window
- Append all urls in the selected text to the scratch pad

- Paste: Create RCFV file from the clipboard
- Paste: If clipboard is text or single file/url then replace current file
- Reread current file/url Ctrl+F5

- Find next selected text F3
- Copy the selected text to the clipboard (raw)
- Append selected text or current word/link (raw) to scratchpad
- Copy and edit selected text [Shift+C]

ts such as those present in the [spacer sequence](#) of sequenced archaea. ^[8] Cas9-guided Cas proteins cut and cleave specific DNA sequences. ^[9] This editing process produces DNA repair products, and treatment of [Nobel Prize in Chemistry](#) in

The CRISPR-Cas system is a prokaryotic system within plasmids and phages [4] [Spacer DNA] helps Cas (CRISPR-associated protein) cut foreign RNA. [7] CRISPR are found

Cas9 (or "CRISPR-associated protein 9") is an enzyme that cuts strands of DNA that are complementary to the target sequence.

We will select Google Translate (from English to Spanish). Note: the three asterisks in the description field will force the query to be made in the default browser and never in RCFV even if you try to select RCFV to render it. This is because certain queries just don't work or don't work well in RCFV. For best results just press **Open in default browser**.

9 [C... ions PR-C... le C... yster... f1) :2) es R su

Mechanism 3.1 Spacer acquisition

elements such as those present in the spacer sequence. Other RNA-guided Cas proteins cut only 90% of sequenced archaea. [8]

recognize and cleave specific sequences from the basis of a mechanism. [9] This editing process led to the development of gene editing technology products, and treatment of the Nobel Prize in Chemistry in

A special note on those three-star, ***, lookups: If you are doing multiple lookups simultaneously and you are using a mix of browser-only and regular lookups, then use the **Open in RCFV** option. The browser-only lookups will still only use the default browser, but the other lookups will behave normally – you can read them into RCFV and combine them if you want.

DETECT LANGUAGE ENGLISH SPANISH FRENCH

SPANISH ENGLISH ARABIC

Cas9(or "CRISPR-associated protein 9") is an enzyme that uses CRISPR sequences as a guide to recognize and cleave specific strands of DNA that are complementary to the CRISPR sequence. Cas9 enzymes together with CRISPR sequences form the basis of a technology known as CRISPR-Cas9 [CRISPR gene editing] that can be used to edit genes within organisms. [9] This editing process has a wide variety of applications including basic biological research, development of biotechnology products, and treatment of diseases. [10] [11] The CRISPR-Cas9 genome editing technique was a significant contributor to the Nobel Prize in Chemistry in 2020 being awarded to Emmanuelle Charpentier and Jennifer Doudna. [12] [13]

Cas9 (o "proteína 9 asociada a CRISPR") es una enzima que utiliza secuencias CRISPR como guía para reconocer y escindir hebras específicas de ADN que son complementarias a la secuencia CRISPR. Las enzimas Cas9 junto con las secuencias CRISPR forman la base de una tecnología conocida como CRISPR-Cas9 [edición de genes CRISPR] que se puede utilizar para editar genes dentro de organismos. [9] Este proceso de edición tiene una amplia variedad de aplicaciones que incluyen investigación biológica básica, desarrollo de productos biotecnológicos y tratamiento de enfermedades. [10] [11] La técnica de edición del genoma CRISPR-Cas9 fue un importante contribuyente al Premio Nobel de Química en 2020 otorgado a Emmanuelle Charpentier y Jennifer Doudna. [12] [13]

Send feedback

Here is the browser result from Google Translate. Of course, if you want to translate the whole document then you should just do it in Google Translate or other similar service. RCFV makes it easy to get definitions and translations of unfamiliar words or short sections of text, which is great for language learning or when reading articles with unfamiliar terminology.

In fact, Lookup can be even easier than what we've shown. For example, let's say that you want to be translating various sections of a document as you are reading it. You now want to get a translation for the highlighted sentence below. To simplify matters all you need do is press {Alt}+{F2} which will do an immediate lookup of the selected text using the last used template and selected software and, voilà, it's done.

of the world. The first description of what would and his colleagues in 1987. They accidentally cloned of alkaline phosphatase) [14] that was their typically arranged consecutively, without of the interrupted clustered repeats.

shed two articles about a cluster of interrupted sequences that intervened the direct repeats among a typing method that was named spoligotyping ,

Francisco Mojica at the University of Alicante in Spain studied repeats observed in the archaeal organisms of Haloferax and Haloarcula species, and their function. Mojica's supervisor surmised at the time that the clustered repeats had a role in correctly segregating replicated DNA into daughter cells during cell division because plasmids and chromosomes with identical repeat arrays could not coexist in Haloferax volcanii . Transcription of the interrupted repeats was also noted for the first time; this was the first full characterization of CRISPR. [17] [18] By 2000, Mojica performed a survey of scientific literature and one of his students performed a search in published genomes with a program devised by himself. They identified interrupted repeats in 20 species of microbes as well as additional interrupted repeats, proposed to alleviate the confusion stemming from them. [20] In 2002, Tang, et al. showed evidence into long RNA molecules that were subsequently identified as spacer-repeat units. [21] [22]

Here is an abbreviated example, based on the previous examples, showing another way to use Lookup. While we are reading <https://www.polygon.com/21266801/best-movies-on-netflix> we would like to be able to look up the Rotten Tomatoes' score for each of the films that seem interesting to us. For each potential film we can use the context menu item, **Append selected text or current word/link (raw) to scratchpad**, to add the film to a list of films which we will later lookup in Rotten Tomatoes. Note that we can also just drag and drop the film name to the scratchpad and then press {Enter} to add a newline sequence.

We will use the context menu option to create a manual lookup list which we can **Copy** and **Paste** (sorry, you can't drag and drop here) into the Lookup input box. Then we will select the Rotten Tomatoes template and open the results in the default browser.

Alternatively, and perhaps more simply, we can lookup each film in real time, as we get to it.

Dick Johnson Is Dead

Image: Netflix

If you were worried about a loved one (Cameraperson) does exactly that in document of her relationship with her over-the-top scenarios), his funeral, a wife. Both for the a

For the first film we'll highlight the name and press {F2}; then we will select the Rotten Tomatoes template and then Open in default browser.

More relevant than ever after a year of unarmed Black citizens, this impressive

..... **His House**

Photo: Aidan Monaghan / Netflix

For all subsequent films we'll highlight the name and press {Alt}+{F2} which will do an immediate Rotten Tomatoes lookup of the selected film.

It feels a little late for new horror movies as we move further away from Halloween and into more cheer-focused holidays, but it's never too late for a movie as intensely relevant as **His House**, which turns the trials of immigration into a shock-filled ghost story. **Gangs of London**'s Sope Dirisu and **Lovecraft Country**'s Wunmi Mosaku play a Sudanese couple seeking asylum in Britain, where they encounter supportive but not exactly friendly social workers (including former **Doctor Who** star Matt Smith) who can't accept that the home they've been given is haunted. Caught between the ghosts at home and an inflexible system ready to send them back to a war-torn country, the couple struggle with their past and their highly questionable future. -- TR

..... **Hunt for the Wilderpeople**

Photo: Sony Pictures Home Entertainment

The truly rare family film that's safe for kids, funny and acerbic enough for adults, and surprising enough to keep everyone absorbed, Taika Waititi's **Hunt for the Wilderpeople** is one of cinema's great underseen gems. An authentically refreshing take on the usually cloying "orphan

The screenshot shows the RCFV interface with several toolbars and a search window. The top toolbar includes 'Format' (with options for wrap, no wrap, hex, and hex 2), 'Find' (with search input 'House'), 'Filters' (with 'Include' and 'Exclude' sections), and navigation controls like 'add files', 'remove files', 'internet / HTML', 'Mail', 'File List = 2 (F6)', 'First File', 'Prev File', 'Next File', 'Last File', 'Refresh (F5)', 'Exit (Alt)+ (F4)', 'Copy or edit', 'Help (F1)', 'Pin on top', 'Settings', 'Hover help', 'Key-board', and 'Func Keys'. The search window shows 'House' in the input field and search results for '0-Origin' and 'Buffer Size +200'. The bottom right corner contains the text 'RCFV by Anthony Zackin, Copyright © 2018 Takamonto, LLC'.

Here are the browser windows resulting from the film queries to the Rotten Tomatoes website. We can see that our choices look pretty good.

In this presentation we have demonstrated the power of the **Lookup** feature of RCFV. We have shown how to:

- Do Google or Bing, etc. searches of highlighted terms in the text
- Do a manual lookup of arbitrary text including specifying multiple terms in one query
- Create multiple queries at one time by specifying multiple query templates with the specified text which can consist of one or multiple terms
- Manually select predefined, saved filter settings to apply to the output when multiple lookup templates are combined into one RCFV file
- Export the results of a single query or multiple, combined queries
- Use filtering to extract the matched text into the scratchpad which can then be easily converted into a multiple term manual lookup query
- Use Lookup for language translation, for movie ratings, for encyclopedia entries, and any other non-static query, viz., those that require dynamic parameters

Lookup is a very powerful tool, but it requires that users do a little work to define the templates which work for them. Once defined, though, they provide you with the ability to easily generate parameterized queries and do multiple lookups in a single operation.
